

# LA WUN SHUN LETT [SHUN]

Full-Stack Developer · Software Engineer · AIoT Developer

lawunshunlett@gmail.com | +65 97584319 | 730746 Woodlands | [GitHub](#) | [Portfolio](#) | [LinkedIn](#)

## SUMMARY

---

Computer Engineering diploma graduate from Singapore Polytechnic with hands-on experience in software support, system deployment, full-stack web development, and technical troubleshooting. Experienced in designing, developing, and maintaining end-to-end applications using PHP, JavaScript, SQL, Linux, and Docker while supporting production environments and end users. Skilled in resolving system issues, maintaining technical documentation, and delivering reliable software solutions. Passionate about building scalable technologies and continuously learning modern application and infrastructure practices.

## WORK EXPERIENCE

---

### Associate Software Engineer Intern at Applied Instruments Pte. Ltd. *March 2025 - October 2025*

- **Provided first-line software support for internal business systems** — diagnosed and resolved software issues, communicated status updates to relevant teams, and ensured timely resolution with minimal disruption to operations.
- **Designed, developed, and deployed a GatePass Tracking Web Application (PHP, MySQL, JavaScript)**, supporting operational tracking of 300+ service transactions; trained users and provided post-deployment support.
- **Troubleshoot software and system issues** — developed test cases, identified and resolved bugs, validated system behaviour before each release, and maintained system stability in a live production environment.
- **Deployed and maintained system infrastructure** — set up a Linux server with Docker containerisation, HTTPS, and domain routing; administered MySQL databases and ensured continuous system availability.
- **Maintained and improved UI of a process monitoring application** — enhanced iFIX SCADA frontend views for the Chemical Distribution Module, improving real-time visibility for operations teams.
- **Prepared technical documentation and user guides** — wrote system specifications, operational procedures, and change logs; maintained accurate records throughout the application lifecycle.
- **Represented the company at SEMICON Southeast Asia 2025 (Marina Bay Sands)** — presented software solutions to industry visitors and stakeholders.

### Part-Time Technical Assistant at Applied Instruments Pte. Ltd. *June 2023 - March 2024*

- **Contributed C# UI components** — real-time data visualisation panels and animations for a desktop equipment status monitoring application.
- **Designed and fabricated PCB prototypes** using Autodesk Inventor and CNC milling for rapid hardware validation.
- **Implemented a 3-axis CNC drilling simulation** using G-code, Arduino, and servo motor controllers for system demonstration.

## EDUCATION

---

Diploma in Computer Engineering, Smart City & IoT Applications — Singapore Polytechnic

2023 – 2026

Coursework: Full-Stack Web Development, Data Analytics, Cloud Computing, Computer Networking, Mobile App Development (Android), AIoT Systems, Microcontroller Programming (STM32, ESP32, Arduino, Raspberry Pi, Bosch XDK)

Electives: Internet of Things, Conversational Mandarin, Conversational Korean

## RELEVANT PROJECT & ACADEMIC PROJECTS

---

- **GatePass Tracking Web Application (PHP, MySQL, JavaScript, Docker, Linux)** — Designed and deployed a full-stack internal system from requirements gathering to production, supporting 300+ service records; conducted user training and maintained ongoing system support.
- **Supermarket Self-Checkout System (DevOps / IoT / CI/CD | Python, MariaDB, Raspberry Pi)** — Developed an IoT-based self-checkout system with barcode scanning, database transactions, and automated receipt printing, improving checkout efficiency and reducing manual cashier dependency, along with a web-based barcode generation page for self-collection. (Demo: <https://youtu.be/h2f91rtcZLM>).
- **Stock Market Web Application (HTML, CSS, JavaScript, API Integration)** — Created a responsive stock-tracking web application displaying simulated and real-time prices with charts, search filters, and interactive UI for improved market data visualisation.
- **5G AIoT Face Recognition Application** — Developed a multi-threaded AI door-access system over Singtel's 5G broadband network, leveraging multi-face recognition across live RTSP camera streams for low-latency smart access control at 30+ FPS; access logs recorded automatically recorded using Excel (openpyxl).
- **IoT Secured School Locker (C++, ESP8266, RFID)** — Developed embedded C++ firmware for an IoT locker system with RFID & PIN access, OTP-based PIN reset, real-time Telegram alerts, and centralised activity logging — end-to-end hardware-software integration and validation. (Website : <https://mmyathet93.wixsite.com/secure-locker>)
- **Smart City & Design** — Developed a construction-worker smart safety vest using Bosch XDK 8-in-1 sensors for environmental and motion monitoring, integrating an automatic cooling fan for heat stress mitigation and enabling fall/slip detection alerts and risk trend monitoring in construction environments.
- **SP Batey Hackathon & Challenge 2024** — SP Student Social Media App (Android Studio, Firebase) – Built a mobile app prototype with user authentication, posting, and real-time content updates, enabling instant data synchronisation and dynamic content retrieval.
- **Red Wine Quality Analysis (R, rpart, Decision Tree)** – Performed exploratory data analysis and built decision tree classification models to predict wine quality, handling class imbalance using weighted models and evaluating across multiple metrics.

## KEY SKILLS

---

- **Languages:** Python, PHP, JavaScript, C#, C++, R, R Shiny, HTML/CSS, Visual Basic
- **Industrial & Automation:** iFIX SCADA, system testing, regression testing, machine documentation, semiconductor equipment support
- **AI & Data:** OpenCV, CodeProject.AI, Python data processing, R Studio, PowerBI, decision tree & regression modelling
- **Full-Stack & Web:** REST API design & integration, session management, HTTPS, dynamic web development, OOP, Client/Server architecture
- **Databases:** MySQL, MariaDB, SQL — schema design, queries, validation, optimisation
- **IoT & Embedded:** ESP8266, ESP32, Raspberry Pi, STM32, Arduino, Bosch XDK, RFID, sensors & actuators, MQTT
- **DevOps & Deployment:** Docker, Linux, server networking, domain routing, CI/CD basics, Git
- **Cloud & Networking:** AWS basics, TCP/IP, 5G concepts

## SOFT SKILLS & ACTIVITIES

---

- Clear technical communication with cross-functional and operations teams; detail-oriented with structured problem-solving approach
- SP Batey Hackathon & Challenge 2024 participant | Vice Class Representative | SEMICON Southeast Asia 2025 booth representative
